

Combining people and technology for excellence

PRESS RELEASE

Aston Martin DB4

Jack Knight Developments were originally commissioned to produce the Aston Martin complete gearbox as a reproduction item in 1980's. These gearboxes are produced to ZF specification with some customers taking advantage of our involute dog box for this car. We can supply replacement components for this model and many others, such as gears and shafts. For more information do not hesitate to contact the design team on 01483 764326.

Austin Healey 3000

We produce the gearkits in two ratios - Tulip, the original works rally ratios, and the Sebring which is similar to the works sebring race ratios, having a higher first gear therefore only needing the overdrive on top to create a 5 speed gearbox. The gearkit is straight cut synchromesh and can be fitted to existing mainshafts. These gear kits have a proven race history and are available from stock.

Jaguar E + C Type

We produce steering assemblies for both jaguar E and C Type as a direct replacement for your existing item. We also offer a gearkit for the Jaguar E Type, which is a straight cut four speed synchromesh. We have been producing

these components for over twenty years and all items are held in stock. If you require any more information on these items and many more do not hesitate to contact the sales team on 01483 7643
