Steering Components		
JKD IMUJ	Universal Joint	£75.00
JKDIMM	Male end 3/16 Spline	£45.00
JKDIMF	Female end 3/16	£42.40

PRESS RELEASE

Changing gear has never been so easy **Benefits:**

Jack Knight are proud to announce a new gearshift system that converts the H pattern selection to a sequential shift arrangement

Jack Knight have been designing and manufacturing automotive components for over 50 years.

Combining the reliability of mechanical linkages and gear technology with the flexibility of electronics and software control. This system will offer a serious alternative to the sequential gearbox at a far lower price and without the problems some sequential gearboxes have had.

Designed and manufactured to the same exacting standards as our steering racks

The system will be supplied in a kit for installation and will replace the conventional gear lever. The design of the kit includes the JKD quickshift system making gearchange even quicker

- Robust system with less moving parts than the sequential alternative
- All components are manufactured 'In House'
- Product design underpinned by extensive validation and endurance programme.
- Competitively priced
- All work is supplied with a full 12month warranty.
- Optional steering wheel mounted Paddle switches and clutch control
- Constant high speed gear change
- Designed and manufactured to the same exacting standards as our steering racks

The kit can be fitted to RWD, FWD, 4WD including transaxles. Application suitable for race, rally, track day or general high performance use.

Combine this kit with a Jack Knight dogbox and LSD and you will have a truly race winning transmission at less than half the cost of an internal sequential alternative.
